MISSISSIPPI STATE DEPARTMENT OF HEALTH 2014 JUN -2 AM 11: 4.1

BUREAU OF PUBLIC WATER SUPPLY

CCR CERTIFICATION

CALENDAR YEAR 2013

CALENDAR SUPPLY

Public Water Supply Name Bryandale 00/00/0 List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.

Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other) Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill)
Email message (MUST Email the message to the address below) Other: Date(s) customers were informed: ___/__/___, __/__/___, Date Mailed/Distributed: 5 128 12014 CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: / As a URL (Provide URL As an attachment As text within the body of the email message CCR was published in local newspaper. (Attach copy of published CCR or proof of publication) Name of Newspaper: Date Published: ____/__/ CCR was posted in public places. (Attach list of locations) Date Posted: / / CCR was posted on a publicly accessible internet site at the following address (DIRECT URL REQUIRED): CERTIFICATION I hereby certify that the 2013 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply. Name/Title (President, Mayor, Owner, etc.) Deliver or send via U.S. Postal Service: May be faxed to:

(601)576-7800

May be emailed to:

DEFINITIONS

may not be familiar with. To help you better understand these terms, In the table below you will find many terms and abbreviations you we've provided the following definitions:

pected risk to health. MRDLG's do not reflect the benefits of the use

of disinfectants to control microbial contaminants

a disinfectant allowed in drinking water. There is convincing evia drinking water disinfectant below which there is no known or exdence that addition of a disinfectant is necessary for control of microbial contaminants. Maximum residual disinfectant level (MRDL) - the highest level of Maximum residual disinfectant level goal (MRDLG) - The level of

expected risk to human health. MCLG's allow for a margin of safety. of a contaminant in drinking water below which there is no known or

Maximum contaminant level goal (MCLG) - the "Goal" is the level

is the highest level of a contaminant that is allowed in drinking water

Maximum contaminant level (MCL) - the "Maximum Allowed" MCL

process intended to reduce the level of a contaminant in drinking

reatment Technique (TT) - a treatment technique is a required

system must follow.

exceeded, triggers treatment or other requirements that a water

Action Level (AL) - the concentration of a contaminant, that if

NR—Monitoring not required, but recommended

NA—Not applicable. were found to be positive.

Positive samples/month— Number of samples taken monthly that

per billion corresponds to one minute in 2,000 years, or a single Parts per billion (ppb) or Micrograms per liter (ug/L) - one part

penny in \$10,000,000.

in \$10,000

Parts per million (ppm) or Milligrams per liter (mg/L) - one part per million corresponds to one minute in two years or a single penny

Non-Detects (ND)- laboratory analysis indicates that the constituent

MCL's are set as close to the MCLG's as feasible, using the best

available treatment technology.

BRYANDALE CCR (Corrected CCR) Adams County, Mississippi Public Water Supply I.D. No. MS0010010

The Water We Drink - Utility Services LLC is pleased to present our Annual Water Quality Report for the year 2013. This report is designed to inform you about the quality of your water and the services we deliver to you every day.

is My Water Safe? Yes, Utility Services diligently safeguards its water supplies and although we did not complete the required monitoring for Nitrates (as shown below) and cannot be sure of the quality of your water at that time, all subsequent testing has shown that your tap water has met all US EPA & state drinking water standards.

Do I need to take any special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergoine organ transplants, people with HIV/Aids or other immune system disorders, some elderly, and Infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provides. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptospordium and other microbiological contaminants are available from the Safe Drinking

Where does my Water come from? The water source for Bryandale is one (1) well located off Highway 84/98 which draws its water from the Lower Catahouta Formation.

Source Water Assessment and its availability - A Source Water Assessment Plan (SWAP) is available from the Massissippi State Department of Health for this system. This Plan is an assessment of a delineated area around our listed source through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources,

Why are there contaminants is my Drinking Water? Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Sale Drinking Water Hottler (800-428-4791). The sources of drinking water (both tap and bottled) include rivers, laises, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves come from sewage treatment plants, septic systems, epicultural livestock operations, and widdlife. Inorganic contaminants, such as saits and metals, which can be naturally occurring or result from untern some variety of sources such as agriculture, urban storm water runoff, and residential uses, organic chemical contaminants, including synthetic and volable organic chemical contaminants. Including synthetic and volable organic chemicals contaminants are production, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities. In order to ensure that your tap water is safe to drink, EPA provide the same protection for public health.

How can I get involved? In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all our customers. If you have a particular question about your water supply, lease contact BIIIy Bouchillon @855-340-0111.

Additional Information for Lead - If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service tines and home plumbing. The Bryandate Water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been slitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minimize before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water lested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hottine or at https://www.epa.gov/safewater-lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact (801) 578-7592 if you wish to have your water tested.

Beginning January 1, 2004, the Wisaissippi State Department of Health (MSDH) required public water systems that use chlorine as a primary disinfectant to monitor/lest for chlorine residuals as required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements and found no Maximum Residual Disinfectant Level (MBCN) violations

						SOUTH TO (IN THE) HOUSE	allo.
Sampling Period	Range (L	(KgiH)wa.	MCLRAA*	Units	RAA Date	RAA Your Water	Typical Source
Jan-Dec 2013	0.50	0.80	4.0	ma/L	2013	0.80	Water additive used to control microhes
	Sampling Period	Sampling Period Range (L	Sampling Period Range (Low(High)	Sampling Period Range (Low(High) MCL RAA*	Sampling Period Range (LowfHigh) MCL RAA Units	Sampling Poriod Range (Lowifiligh) MCL RAA* Units RAA Date	TOO DEC TOO THEE

The water system was tested a minimum of one (1) monthly sample in accordance with the Total Coliform Rule. During the monitoring period covered by this report, the following detections were noted: There were NO positive bacteriological samples during the monitoring period of January 1st to December 31st, 2013.

Radionuclides - No violations were detected in the results for the Calendar Year 2013.

Corrtaminant	Required Sampling Frequency	Number of Samples Taken	Date Sampled	MCL	Your Water	Health Effects
Nitrate/Nitrile	Annually	1	1/15/2013	10ррт	0.16ppm	Infants below the age of six months who drink water containing Nitrata/Nitrite in excess of the MCL could become seriously B, and II untreated may die. Symptoms include shortness of breath and blue-baby syndrome.

In the table below, we have shown the drinking water contaminants that were detected during the calendar year of this report. The presence of contaminants does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done during the calendar year of this report. The EPA or the State required us to monitor for certain contaminant less than once per year because the concentrations of these contaminants do not change frequently.

Inorganics	Sample Date	MCL	Unit	Your Water	Violation	Typical Source
Barlum	April 27, 2011	2	ppm	0.0048	No	Discharge of drilling wastes; discharge from matal refineries; erosion of natural deposits
Fluoride	April 27, 2011	4	ppm	0.587	No	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer & aluminum factories
Lead	2009/2011	15	ppb	1.0	No	Corroelon of household plumbing systems; erosion of natural deposits
Copper	2009/2011	1.3	ppm	0.2	No	Corrosion of household plaunbing systems; crosion of natural deposits; leaching from wood preservatives

Thank you for allowing us to continue to provide your family with clean, quality safe drinking water this year. In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all of our customers. Please call our office if you have any questions.

We at UtilityServices, work around the clock to provide top quality drinking water to every tap of every customer of the Bryandale Water System. We ask that all our customers help us to protect and conserve our water sources, which are the heart of our community, our way of life, and our children's future.

The Water We Drink – Utility Services LLC is pleased to present our Annual Water Quality Report for the year 2013. This report is designed to inform you about the quality of your water and the services rvices we deliver to you every day

is My Water Safe? Yes, Utility Services diligently safeguards its water supplies and although we did not complete the required monitoring for Nitrates (as shown below) and cannot be sure of the quality of your water at that time, all subsequent testing has shown that your tap water has met all US EPA & state drinking water standards,

Do I need to take any special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/Aids or other immune system disorders, some elderly, and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provides. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Holline at (800) 426-4791.

Where does my Water come from? The water source for Bryandale is one (1) well located off Highway 84/98 which draws its water from the Lower Catahoula Formation.

Source Water Assessment and its availability - A Source Water Assessment Plan (SWAP) is available from the Mississippi State Department of Health for this system. This Plan is an assessment of a delineated area around our listed source through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources.

Why are there contaminants is my Drinking Water? Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap and bottled) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff. industrial, or domestic wastewater discharges, oil and gas production, mining or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities. In order to ensure that your lap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved? In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all our customers. If you have a particular question about your water supply, please contact Billy Bouchillon @855-340-0111.

Additional Information for Lead - If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Bryandale Water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater.lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact (601) 576-7582 if you wish to have your water tested.

Beginning January 1, 2004, the Mississippi State Department of Health (MSDH) required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements and found no Maximum Residual Disinfectant Level (MRDL) violations.

Residuals	Sampling Period	Range (Lo	ow/High)	MCL RAA*	Units	RAA Date	RAA Your Water	Typical Source
Chlorine	Jan-Dec 2013	0.50	0.80	4.0	mg/L	2013	0.61	Water additive used to control microbes

*RAA = Running Annual Average

The water system was tested a minimum of one (1) monthly sample in accordance with the Total Coliform Rule. During the monitoring period covered by this report, the following detections were noted: There were NO positive bacteriological samples during the monitoring period of January 1st to December 31st, 2013.

Radionuclides - No violations were detected in the results for the Calendar Year 2013.

Contaminant	Required Sampling Frequency	Number of Samples Taken	Date Sampled	MCL	Your Water	Health Effects
Nitrate/Nitrite	Annually	1	1/15/2013	10ppm	0.16ppm	Infants below the age of six months who drink water containing Nitrate/Nitrite in excess of the MCL could become seriously ill, and if untreated may die. Symptoms include shortness of breath and blue-baby syndrome.

In the table below, we have shown the drinking water contaminants that were detected during the calendar year of this report. The presence of contaminants does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done during the calendar year of this report. The EPA or the State required us to monitor for certain contaminant less than once per year because the concentrations of these contaminants do not change frequently.

DBP Contaminants	Sample Date	MCL	Unit	Your Water	Violation	Typical Source
Trihalomethanes, Total (TTHM)	June 26, 2008	80	ppb	28.25	No	By-product of drinking water disinfection
Haloacetic Acids, Total (HAA5)	June 26, 2008	60	ppb	37	No	By-product of drinking water disinfection

Inorganics	Sample Date	MCL	Unit	Your Water	Violation	Typical Source
Barium	April 27, 2011	2	ppm	0.0048	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Fluoride	April 27, 2011	4	ppm	0.587	No	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer & aluminum factories
Lead	2009/2011	15	ppb	1.0	No	Corrosion of household plumbing systems; erosion of natural deposits
Copper	2009/2011	1.3	ppm	0.2	No	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

*****April, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING*****

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007- December 2007, Your public water supply completed sampling by the scheduled deadling, however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at (601)576-7518.

Thank you for allowing us to continue to provide your family with clean, quality safe drinking water this year. In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all of our customers. Please call our office if you have any questions.

We at UtilityServices, work around the clock to provide top quality drinking water to every tap of every customer of the Bryandale Water System. We ask that all our customers help us to protect and conserve our water sources, which are the heart of our community, our way of life, and our children's future.
